ICT Security Risk Management – MFSA Guidelines Explained

Course No 132

Participants will be introduced to the ICT and Security Risk Management Guidelines that were issued by the Malta Financial Services Authority (MFSA) late last year. The Guidelines apply to all sectors of industries licensed by the MFSA. The publication of these guidelines has therefore a very wide impact on the businesses and are applicable to companies of any size, from 3-person family TILs to the larger companies. There is a core understanding that risk will vary according to the size of the business and that the control measures will likewise and proportionately be materially different. As a result, a consistency of outcomes and a strong security posture is always expected. This course will explain the fundamentals of performing a risk-based assessment, how to identify critical assets and apply security controls, and how to establish and maintain an operational governance framework that must include ICT Governance and Risk Mitigation as an intrinsic part, even if solutions are based on Software as a Service (SaaS) such as XERO, GMAIL and Office365.
